

IPS 2000HFO

DEFINING EXCELLENCE THROUGH INNOVATION

IPS 2000HFO is an innovative two component, medium density, one to one by volume high yielding spray foam, Class 1 rated wall insulation system designed for commercial, residential & industrial applications. IPS 2000HFO is intentionally formulated without harmful HFCs, leading to an exceptionally low Global Warming Potential (GWP.)

ENERGY EFFICIENT

With a superior R-Value per inch compared to conventional insulation systems, coupled with a seamless application that minimizes air leakage, spray foam insulation proves highly effective in substantially lowering continually escalating energy costs.

INSULATION THAT PAYS FOR ITSELF

Spray foam insulation pays for itself over time by significantly reducing energy costs through its superior insulation properties, resulting in lower utility bills and creating a more energy-efficient and cost-effective home or building.

ENVIRONMENTALLY CONSCIOUS

Our closed cell formulation has a global warming potential of less than 1, which is 99.9% less than traditional formulations and is considered a low GWP product. Innovative Polymer Systems converts Polyethylene Terephthalate (PET) recycled from consumer plastics into our spray foam formulation furthering our commitment to the environment.

Long-lasting

Unlike some traditional insulation materials, spray foam does not settle or degrade over time, maintaining its effectiveness and insulation properties for an extended period, contributing to long-term energy savings.
