

THERMA - SHIELD™ | 2003

THERMA-SHIELD™ 2003 is a closed-cell spray foam insulation that has a Global Warming Potential (GWP) of 1—99.9% lower than traditional blowing agents, aligning with GWP reduction initiatives. This high-performance insulation and air barrier is ideal for both residential and commercial construction. THERMA-SHIELD™ 2003 enhances jobsite efficiency, reduces labor and overhead costs, and offers a lower installation cost.

DEFINING EXCELLENCE THROUGH INNOVATION

SOUND INSULATION

Our closed cell formulation has a global warming potential of less than 1, which is 99.9% less than traditional formulations and is considered a low GWP product. Innovative Polymer Systems converts Polyethylene Terephthalate (PET) recycled from consumer plastics into our spray foam formulation furthering our commitment to the environment.

LONG LASTING

Spray foam insulation boasts exceptional durability, ensuring a long-lasting and effective solution for maintaining energy efficiency in buildings.

PROVEN TECHNOLOGY

Spray foam was developed in the late 1930's and was used commercially in the 1940's with exponential growth thereafter.

INSULATION THAT PAYS

Spray foam insulation pays for itself over time by significantly reducing energy costs through its superior insulation properties, resulting in lower utility bills and creating a more energy-efficient and cost-effective home or building.
